IV *at 11:30* *as above*
11/3 *Ref*

If there is any possibility of a criminal charge we can do it if not it is useless just for idle curiosity.

9/3 *Leay*
II *Eng. 19.*

That is your opinion
Plans? Art 27a reads
"exclusively" etc etc which
might prove the same.

III *Leay*
In my opinion a criminal charge
against these persons would be dismissed.
In fact, we have no evidence to support a criminal charge.

A/A.C. (or)

What does he
wish to do with
~~the~~ a Health Office
report?

8/3. Ray
4 per.

He hopes to prove
the stuff is not genuine;
but I do not consider
this worth the trouble
and expense.

Wayside Police Station.

March 7, 1929.

REPORT ON A substance supposed to be Varnish.

Made by P.P.C.S. Coyne

Forwarded by

[Signature]

Sir,

*4/12/29
The sample
to come to
this can
used as
varnish
Shore and
west for
analysis
4/3/29*

*If the substance
can be used as
varnish, I think
we have a case. As the
varnish also
being the same
to some extent
which should
be preserved.*

A.C.S.

At 9 a.m. on March 7, a wheelbarrow was brought to the Station and on examining the contents of the tins therein, I found a substance resembling opium. Accompanied by C.D.C. 186 Zah Pau Ying I visited 170 Whashing Road where, in a wooden structure, I found this substance in the process of making, also a large quantity stored on the premises. I then visited 4322 North Shanai Road where I saw the person responsible for the sale and manufacture of this substance. This man claims that it is a varnish and that he has manufactured it in the Settlement for three years, he also admits that he is named Lee Koh Hwa (李國華) Proprietor of Wha Chong Oil Press Factory, (See attached Newspaper extract) whom the Chinese Authorities were desirous of making the acquaintance of about three years ago for manufacturing a substance for the dilution of opium.

I bought a 2 lbs. tin of this substance and I think that were a chemical test applied, as applied to varnishes, the reaction would prove negative. Although I might point out that the label on the tin claims that this substance is different from other varnishes. I would also point out that no books are kept regarding the names and addresses of customers, Lee Koh Hwa (李國華) stating that all his trade is with Hankow and river ports. By the appearance of the shop there does not seem to be much of a legitimate business. In view of these facts I

*I suggest that
the substance
be submitted
to a laboratory
for analysis
4/1/29*

think a chemical test might be applied to this substance and should the reaction prove negative, the person frequented under No. 272 of the C.C. R.C.

Yours Obediently,

Senior Detective 1/a Wayside J. Coyne P.P.C.S. 22.

Rough translation of a label attached to the Tin.

The undersigned has discovered the trade in Chinese varnishes, which are Chinese products and exported to Foreign Countries, is getting low owing to its irritable smell, and thus the foreign varnishes are being used in preference to ours. As our Chinese always adopt the old method and have no idea to reform it, the exportation of our Chinese paint is nearly ceased. The foreign paint is not so stable and easy to be defiled and decayed. If our Chinese paint is reformed by diminishing the irritable smell, the trade in that line will be restored. The undersigned has invented the glue mixed with chemical liquid, which would be far better than other paint when taking into use, as it has no irritable smell and the brightness can last forever, and its name is called "Sanitary Varnish", and the Trade Mark is registered as "Flying Pongo".

Proprietor of Wha Chong Oil Press Factory,

Chung Shing Road, Chapei, Shai.
